CONTENTS

01. What you'll find in each document

- 02. 1. CLIENT-PROPOSAL.pdf (read first)
- 03. 2. PHASE-1-ENGAGEMENT-AGREEMENT.pdf (the contract)
- 04. 3. COMPLIANCE.pdf (board + counsel review)
- 05. 4. PHASE-2.pdf (reference for future planning)
- 06. 5. TESTIMONIAL-REVIEW.pdf (optional / Phase 2 prep)

07. The DNS records export — read this carefully

08. What the board should know (60-second summary)

09. What the intake coordinator should know (60-second summary)

10. What the IT / compliance officer should know (60-second summary)

11. What's NOT in this packet (it arrives at the demo)

12. Questions?

Date prepared: 2026-06-20 **For:** Agape Counseling Services (815 U.S. 9, Lanoka Harbor, NJ 08734) **From:** Morgan Getkin, Solo Dev (with Mavis as Lead Software Architect)

This folder contains the **client-side documents** the Agape team should look over before the demo and handoff. Read in this order:

#	File	What it is	Pages	What you do with it
1	CLIENT-PROPOSAL.pdf	The proposal — what we built, what it costs, what we found, what we need from you.	26	Read first. If it makes sense, reply "go" (or hop on a 30-minute call).
2	PHASE-1-ENGAGEMENT-AGREEMENT.pdf	The contract — fee, payment terms, scope of work, pre-build deliverables, handoff, 30-day support window.	17	Sign and return. Triggers the demo → DNS cutover → transfer sequence.
3	COMPLIANCE.pdf	The §6 audit trail — every compliance surface (42 CFR Part 2, privacy, accessibility, DMARC) with status, attorney sign-off placeholders, and the §6.9 DNS rollout plan.	13	Board + counsel review. Especially the [ATTORNEY REVIEW PENDING] items in §6.2.4, §6.3, §6.5, §6.6 — your counsel signs off on the exact wording before public launch.
4	PHASE-2.pdf	The Phase 2 workstream catalog — every optional future engagement, sized and described, with the 30-day free support window called out.	12	Reference. Use this when you're ready to plan what comes next (donations, blog, staff page, etc.). No obligation to start any workstream.
5	TESTIMONIAL-REVIEW.pdf	The 42 CFR Part 2 worksheet for the 7 legacy testimonials — pre-filled risk ratings, keep/modify/drop decision table, rewritten-text section, the §2.31 consent form template, signature block.	13	Optional / Phase 2 prep. Use only when you're ready to add compliant testimonials back to the site. The site ships without testimonials (§3.3.5 of DESIGN.md); this worksheet is the path to add them later.

What you'll find in each document

1. **CLIENT-PROPOSAL.pdf** (read first)

A clear, client-friendly summary of:

- **What we built** — a fast, static, mobile-first single-page site at agapenj.org
- **Why it matters** — closes federal 42 CFR Part 2 exposures + eliminates \$1,788/year in SaaS fees
- **What we found** in the live audit of the legacy site (the top 12 issues, ranked by severity)
- **What it costs** — \$2,000 flat fee + ~\$15/year ongoing (domain only)
- **What Phase 1 includes vs. excludes** — explicit scope boundary
- **What Phase 2 looks like** — optional workstreams, quoted separately
- **What we need from you** — including the **DNS records export** (see below)

2. **PHASE-1-ENGAGEMENT-AGREEMENT.pdf** (the contract)

The legal contract:

- **Fee + payment terms** — \$1,000 deposit on sign-off, \$1,000 final payment on transfer
- **§3 Pre-Build Deliverables from the Client** — what you provide before we begin (Cloudflare admin, Web3Forms, Google Workspace admin, **DNS records export**, EIN, FAQ top 10)
- **§5 Demo + transfer protocol** — what happens at the demo, what gets transferred to you, what stays with the dev until final payment
- **§6 Handoff package contents** — source code archive (no GitHub required!), compliance trail, editing guide, Loom walkthrough
- **§8 30-day post-launch support window** — what's included, what isn't
- **§9 Confidentiality + 42 CFR Part 2 context** — the Developer doesn't see PHI, doesn't retain admin access after transfer
- **Standard legal boilerplate** — limitation of liability, dispute resolution, signatures

3. **COMPLIANCE.pdf** (board + counsel review)

The compliance audit trail:

- **Quick-reference summary table** — what's complete, what's attorney-pending, what's awaiting client data
- **§6.1 Crisis Resources** — 988 + SAMHSA + ReachNJ,  complete
- **§6.2.1–§6.2.3 Privacy posture** — what is NEVER sent to third parties,  complete
- **§6.2.4 42 CFR Part 2 Notice** —  template in place, attorney sign-off pending
- **§6.3 Privacy Notice** —  template in place, attorney sign-off pending

- **§6.4 Disclaimers** — ⚠️ EIN pending (you provide)
- **§6.5 Accessibility Statement** — ⚠️ template, attorney sign-off pending
- **§6.6 Consent Checkbox** — ✅ G.17 three-pillar wording in production, attorney sign-off pending
- **§6.7 301 Redirects** — ✅ complete (preserves SEO continuity)
- **§6.8 Visibility Rule** — ✅ every §6 disclosure reachable in ≤ 2 taps
- **§6.9 Email & DNS Security Baseline** — ⌚ DMARC rollout scheduled for the demo (requires your Google Workspace admin access)
- **Brand asset library** — SHA-256 hashes for future integrity verification
- **Lighthouse audit** — 100/100/100/100 verified
- **Hosting context** — Cloudflare Pages (post-G.23, no GitHub in your package)

4. **PHASE-2.pdf** (reference for future planning)

The Phase 2 workstream catalog:

- **How this engagement works** — same four-quadrant model for every Phase 2 workstream
- **What "Phase 2" means** — three categories: zero-cost unlocks, pre-scoped workstreams, custom change requests
- **The Zero-Cost Unlocks** — testimonials (drop a **.md** file, section auto-appears), content edits
- **The Pre-Scoped Workstreams** — small / small-to-medium / medium / large + BIMl cost transparency
- **The 30-Day Support Window** — what's free, what isn't
- **How to start a Phase 2 engagement** — email → estimate → approval → delivery
- **Phase 1 Market Value Anchor** — context for why Phase 2 workstreams are quoted separately

5. **TESTIMONIAL-REVIEW.pdf** (optional / Phase 2 prep)

The 42 CFR Part 2 worksheet for adding compliant testimonials:

- **§1 Testimonial Review Table** — all 7 legacy testimonials with pre-filled risk ratings + recommended actions
 - **§2 Summary Count** — KEEP / MODIFY / DROP decisions
 - **§3 Modified Text** — rewritten text for any MODIFY decisions
 - **§4 Compliance Attestation** — signature block for the authorized representative
 - **§5 Filing Instructions** — how to file the worksheet + consent forms
 - **Appendix A** — the 42 CFR §2.31 consent form template
-

The DNS records export — read this carefully

§3.5 of the engagement agreement asks for a full export of your current DNS records. This is a one-time action and is critical for a clean cutover.

Why we need it: Cloudflare is already your DNS provider, so the website cutover is internal to Cloudflare. But we need to verify that every record currently in place (email subdomains, verification records, third-party SaaS, MX records, etc.) is preserved through the cutover. The export is the authoritative reference.

Suggested wording for your registrar (you can copy-paste this to your registrar's support team or DNS dashboard help):

"We are reviewing our current domain settings and need a full export of all active A, CNAME, MX, and TXT records so we have them for our records. Most registrars let you download this as a zone file or paste a screenshot from the DNS dashboard — either is fine."

What we'll do with it:

1. Cross-reference the export against our live `dig` audit (we do this before the demo)
2. Identify any records we hadn't seen in the live audit (e.g., third-party SaaS subdomains)
3. Confirm every record is preserved through the cutover
4. Log the post-cutover state in `COMPLIANCE.md` for the audit trail

When we need it: Before the demo, so we can verify state and surface any surprises during the demo (not after).

What the board should know (60-second summary)

If you only have 60 seconds, here's the headline:

1. **The build is done.** Lighthouse 100/100/100/100. 42 CFR Part 2 compliant by architecture. Pre-Demo Checklist 62 pass / 0 fail / 1 warn.
2. **The cost goes from \$1,803/year to \$15/year** — the \$1,788/year Town Square Interactive SaaS fee is gone.
3. **You own the site** — Cloudflare account + Web3Forms form endpoint + zipped source code archive. No GitHub. No vendor lock-in.
4. **The 30-day safety net** — the legacy TSI site stays live for 30 days post-cutover. DNS change is one-click reversible. Not betting the program on the rebuild.

5. **The only outstanding items are your team's** — EIN, FAQ top 10, DNS records export, attorney sign-off on the privacy / 42 CFR Part 2 / accessibility / consent-checkbox text. All of these have placeholders in the live build and will be filled in by you + your counsel, not by us.
-

What the intake coordinator should know (60-second summary)

If you're the person who answers the phone when someone calls (609) 242-0086:

1. **The new site is fast.** Loads in under 1.5 seconds on a mid-range phone with slow 4G. The Sticky Call button (tap-to-call) is always one tap away on mobile.
 2. **The FAQ section is your friend.** Top 10 placeholder Q&As are live now (Medicaid, IOP length, evening hours, bilingual, first session, transportation, etc.). Swap them out for your real top 10 from your intake logs — send the file to the dev, it's live in 30 seconds.
 3. **The Crisis Resources section is always visible near the footer.** 988, SAMHSA, ReachNJ. If someone in crisis reaches the site, the resources are two taps away from any viewport state.
 4. **There are no testimonials yet.** The site launched without them. If/when you want to add them, `TESTIMONIAL-REVIEW.pdf` (above) is the worksheet. We drop the file in for you during the 30-day support window; after that, it's a small Phase 2 engagement.
 5. **Editing copy is editing Markdown.** `EDITING_GUIDE.md` (delivered at the demo) walks you through it. No vendor portal. No CMS. No code knowledge required.
-

What the IT / compliance officer should know (60-second summary)

If you're the person who manages Cloudflare, Google Workspace, and the domain:

1. **Cloudflare Pages direct-upload hosting.** The dev deploys via `wrangler pages deploy ./dist`. No GitHub in your package. Your Cloudflare account is yours; the dev's access is removed at handoff.
2. **DNS cutover is internal to Cloudflare.** The Apex `A` record repointing at Cloudflare Pages. All MX / TXT / existing CNAME records preserved. Pre-cutover: receive the DNS records export per §3.5 of the engagement agreement.
3. **DMARC rollout at the demo.** One `TXT` record at `_dmarc.agapenj.org`. Default policy `p=quarantine`. Requires Google Workspace admin access to create the `dmarc-reports@agapenj.org` aggregate-reports mailbox.
4. **MX records are NEVER touched.** Email stays on Google Workspace. The cutover is web-only.

5. **Rollback is one click.** Cloudflare Pages retains every prior deployment. Cloudflare DNS has a one-click rollback. The 30-day safety net is built in.

What's NOT in this packet (it arrives at the demo)

The handoff package at the demo includes additional docs that arrive live (not with this initial engagement packet):

- `EDITING_GUIDE.md` — non-technical guide to editing copy, FAQ, services
- The source code archive (zipped `.zip`) — every file, fully editable, no GitHub required
- A Loom walkthrough of editing + deploying the site
- The credentials envelope (Cloudflare admin, Web3Forms access key, Google Workspace DMARC `rua` mailbox, etc.)
- The §3.5 DNS-export cross-reference (logged in `COMPLIANCE.md` §6.9 / §7.5 rows)

These are presented live at the demo so the dev can walk you through each artifact in context.

Questions?

Reply to the email this packet was attached to, or hop on a 30-minute call. The dev is responsive and prefers questions before signing rather than surprises during the build.

Prepared by Morgan Getkin, Solo Dev (with Mavis as Lead Software Architect). Internal document; not for redistribution outside the engagement.
